Serial No.: 10/611,845 Filed: July 1, 2003 Office Action Date: May 04, 2004 Amendment Date: August 01, 2004

Listing of Claims:

1. (original) Method of operating a four-stroke internal combustion engine including a

variable volume combustion chamber defined by a piston reciprocating within a cylinder

between top-dead center and bottom-dead center points and an intake valve and an exhaust

valve controlled during repetitive, sequential exhaust, intake, compression and expansion

strokes of said piston comprising:

providing an exhaust event during which the exhaust valve is open for expelling

combusted gases from the combustion chamber;

subsequent to the exhaust event, providing a period of simultaneous closure of the

exhaust and intake valves during at least a portion of the intake stroke of the piston effective to

establish a sub-atmospheric pressure condition within the combustion chamber; and,

providing an intake event during which the intake valve is open for ingesting fresh air

into the combustion chamber.

2. (original) Method of operating a four-stroke internal combustion engine as claimed in

claim 1 wherein said sub-atmospheric pressure condition within the combustion chamber

reaches at least about 42 kPa sub-atmospheric.

From: Vincent Cichosz To: Jaime Corrigan Date: 8/1/2004 Time: 5:22:36 PM Page 4 of 19

Serial No.: 10/611,845 Filed: July 1, 2003 Office Action Date: May 04, 2004 Amendment Date: August 01, 2004

3. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 1 wherein said sub-atmospheric pressure condition within the combustion chamber terminates not earlier than about 75 degrees past exhaust stroke top dead center.

- 4. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 1 wherein said sub-atmospheric pressure condition within the combustion chamber reaches at least about 42 kPa sub-atmospheric and terminates not earlier than about 75 degrees past exhaust stroke top dead center.
- 5. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 1 further comprising providing a rebreathe event wherein said exhaust valve is open during at least a portion of the intake event.
- 6. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 5 wherein said rebreathe event is initiated subsequent to initiation of said intake event.
- 7. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 6 wherein said rebreathe event is terminated prior to termination of said intake event.

From: Vincent Clichosz To: Jaime Corrigan Date: 8/1/2004 Time: 5:22:36 PM Page 5 of 19

Serial No.: 10/611,845 Filed: July 1, 2003 Office Action Date: May 04, 2004 Amendment Date: August 01, 2004

8. (original) Method of operating a four-stroke internal combustion engine as claimed in

claim 5 wherein said rebreathe event is characterized by lift of said exhaust valve no greater

than about 50% of maximum valve lift.

9. (original) Method of operating a four-stroke internal combustion engine as claimed in

claim 5 wherein said rebreathe event is initiated about 10 to about 30 degrees subsequent to

initiation of said intake event.

10. (original) Method of operating a four-stroke internal combustion engine as claimed in

claim 9 wherein said intake event is initiated about 20 to about 60 degrees after exhaust stroke

top dead center.

11. (original) Method of operating a four-stroke internal combustion engine as claimed in

claim 5 wherein said rebreathe event is terminated prior to termination of said intake event.

12. (original) Method of operating a four-stroke internal combustion engine as claimed in

claim 11 wherein said rebreathe event is terminated about 10 to about 40 degrees prior to

termination of said intake event.

From: Vincent Cichosz To: Jaime Corrigan Date: 8/1/2004 Time: 5:22:36 PM Page 6 of 19

Serial No.: 10/611,845 Filed: July 1, 2003 Office Action Date: May 04, 2004 Amendment Date: August 01, 2004

13. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 12 wherein said intake event terminates about 20 to about 60 degrees after intake stroke

bottom dead center.

14. (original) Method of operating a four-stroke internal combustion engine as claimed in

claim 5 wherein said intake event is initiated about 20 to about 60 degrees after exhaust stroke

top dead center and is terminated about 20 to about 60 degrees after intake stroke bottom dead

center, and said rebreathe event is initiated about 10 to about 30 degrees subsequent to

initiation of said intake event and is terminated about 10 to about 40 degrees prior to the

termination of said intake event.

15. (original) Method of operating a four-stroke internal combustion engine including a

variable volume combustion chamber defined by a piston reciprocating within a cylinder

between top-dead center and bottom-dead center points and an intake valve and an exhaust

valve controlled during repetitive, sequential exhaust, intake, compression and expansion

strokes of said piston comprising:

establishing a low pressure event within the combustion chamber during the intake

stroke of the piston; and,

From: Vincent Cichosz To: Jaime Corrigan Date: 8/1/2004 Time: 5:22:36 PM Page 7 of 19

Serial No.: 10/611,845 Office Action Date: May 04, 2004 Filed: July 1, 2003 Amendment Date: August 01, 2004

establishing a combustion chamber rebreathe event during the intake stroke of the piston by controlling a rebreathe event exhaust valve opening and closing wherein the rebreathe event exhaust valve opening occurs during the low pressure event.

16. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 15 wherein said low pressure event is established by controlling phasing of an exhaust event exhaust valve closure and the intake valve opening.

17. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 16 wherein the exhaust event exhaust valve closure absolute phase relative to exhaust stroke top dead center is not greater than the intake valve opening phase after exhaust stroke top dead center.

- 18. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 17 wherein the exhaust event exhaust valve closure occurs before exhaust stroke top dead center.
- 19. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 17 wherein the exhaust event exhaust valve closure occurs after exhaust stroke top dead center.

> Serial No.: 10/611,845 Filed: July 1, 2003

Office Action Date: May 04, 2004 Amendment Date: August 01, 2004

20. (currently amended) Method of operating a four-stroke internal combustion engine as claimed in claim 19 wherein the intake valve opening occurs about 0 to about 60 degrees after the exhaust valve closure.

21. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 20 wherein the exhaust event exhaust valve closure occurs about 0 to about 20 degrees after exhaust stroke top dead center.

22. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 16 wherein the exhaust event exhaust valve closure occurs about 20 degrees before exhaust stroke top dead center to about 20 degrees after exhaust stroke top dead center.

23. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 16 wherein the rebreathe event exhaust valve opening occurs about 10 to about 30 degrees after the intake valve opening.

24. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 16 wherein the intake valve opening occurs about 20 degrees after exhaust stroke top dead center to about 60 degrees after exhaust stroke top dead center.

From: Vincent Cichosz To: Jaime Corrigan Date: 8/1/2004 Time: 5:22:36 PM Page 9 of 19

Serial No.: 10/611,845 Filed: July 1, 2003 Office Action Date: May 04, 2004 Amendment Date: August 01, 2004

25. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 16 wherein exhaust event exhaust valve closure occurs about 20 degrees before exhaust stroke top dead center to about 20 degrees after exhaust stroke top dead center and the intake

valve opening occurs about 20 degrees after exhaust stroke top dead center to about 60

degrees after exhaust stroke top dead center.

26. (original) Method of operating a four-stroke internal combustion engine as claimed in

claim 25 wherein exhaust event exhaust valve closure occurs about exhaust stroke top dead

center to about 20 degrees after exhaust stroke top dead center.

27. (original) Method of operating a four-stroke internal combustion engine as claimed in

claim 24 wherein the rebreathe event exhaust valve opening occurs about 10 to about 30

degrees after the intake valve opening.

28. (original) Method of operating a four-stroke internal combustion engine as claimed in

claim 16 wherein exhaust event exhaust valve closure occurs about 20 degrees before exhaust

stroke top dead center to about 20 degrees after exhaust stroke top dead center, the intake

valve opening occurs about 20 degrees after exhaust stroke top dead center to about 60

degrees after exhaust stroke top dead center, and the rebreathe event exhaust valve opening

occurs about 10 to about 30 degrees after the intake valve opening.

From: Vincent Clchosz To: Jaime Corrigan

Serial No.: 10/611,845 Filed: July 1, 2003 Office Action Date: May 04, 2004 Amendment Date: August 01, 2004

29. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 16 wherein exhaust event exhaust valve closure occurs about exhaust stroke top dead center to about 20 degrees after exhaust stroke top dead center, the intake valve opening occurs about 20 degrees after exhaust stroke top dead center to about 60 degrees after exhaust stroke top dead center to about 60 degrees after exhaust stroke top dead center, and the rebreathe event exhaust valve opening occurs about 10 to about 30 degrees after the intake valve opening.

30. (original) Method of operating a four-stroke internal combustion engine including a variable volume combustion chamber defined by a piston reciprocating within a cylinder between top-dead center and bottom-dead center points and at least one intake valve and one exhaust valve controlled during repetitive, sequential exhaust, intake, compression and expansion strokes of said piston comprising:

providing a closed exhaust valve and a closed intake valve during an expansion stroke of said piston;

providing an open exhaust valve and a closed intake valve during an exhaust stroke of said piston;

providing a closed exhaust valve and a closed intake valve during an intake stroke of said piston to establish a low pressure condition within the combustion chamber;

From: Vincent Cichosz To: Jaime Corrigan Date: 8/1/2004 Time: 5:22:36 PM Page 11 of 19

Serial No.: 10/611,845

Amendment Date: August 01, 2004

Office Action Date: May 04, 2004

Filed: July 1, 2003

providing an open exhaust valve and an open intake valve during said intake stroke of

said piston to ingest combusted gases and fresh air, respectively, into said combustion

chamber; and,

providing a closed exhaust valve and a closed intake valve during a compression stroke

of said piston.

31. (original) Method of operating a four-stroke internal combustion engine as claimed in

claim 30 wherein closure of the exhaust valve that is open during the exhaust stroke occurs at

an absolute phase angle relative to exhaust stroke top dead center about not greater than the

phase angle after exhaust stroke top dead center at which opening of the intake valve occurs.

32. (original) Method of operating a four-stroke internal combustion engine as claimed in

claim 31 wherein the closure of the exhaust valve that is open during the exhaust stroke occurs

about 20 degrees before exhaust stroke top dead center to about 20 degrees after exhaust

stroke top dead center.

33. (original) Method of operating a four-stroke internal combustion engine as claimed in

claim 30 wherein the opening of the intake valve occurs about 20 degrees after exhaust stroke

top dead center to about 60 degrees after exhaust stroke top dead center.

From: Vincent Cichosz To: Jaime Corrigan

Serial No.: 10/611,845 Filed: July 1, 2003 Office Action Date: May 04, 2004 Amendment Date: August 01, 2004 Page 12 of 19

34. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 31 wherein the closure of the exhaust valve that is open during the exhaust stroke occurs about exhaust stroke top dead center to about 20 degrees after exhaust stroke top dead center.

35. (original) Method of operating a four-stroke internal combustion engine as claimed in claim 34 wherein the opening of the intake valve occurs about 20 degrees after exhaust stroke top dead center to about 60 degrees after exhaust stroke top dead center.

36. (original). Method of operating a four-stroke internal combustion engine as claimed in claim 35 wherein opening of the exhaust valve that is open during said intake stroke of said piston occurs about 10 to about 30 degrees after the intake valve opening.
